

SUPPORTING THE TRIPLE AIM FRAMEWORK OBJECTIVES IN SCOTLAND USING AN INNOVATIVE ELECTROCEUTICAL THERAPY TO IMPROVE CLINICAL AND ECONOMIC BENEFITS FOR PATIENTS WITH VENOUS LEG ULCERS

The Triple Aim Framework aims to optimise health system performance in NHS Scotland by improving three dimensions 1) quality of healthcare; 2) health of the population; 3) value and financial sustainability.

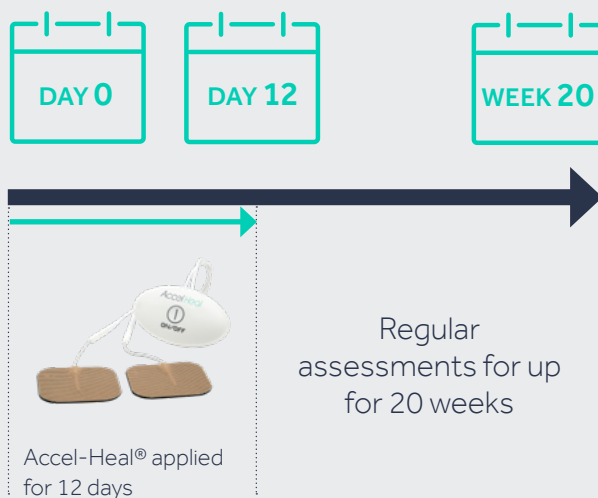

This evaluation aimed to determine the clinical outcomes and clinician feedback of using **Accel-Heal®** in the treatment of VLUs and to assess the cost implications.

- n=10
- 80% female
- Mean age =62 years

- Non-progressing VLU despite compression

WITHIN 2 WEEKS:

Mean pain reduced from 7.2/10 to 3.7

WITHIN 20 WEEKS:

of wounds healed including one of 28 years duration

reduction of wound area

reduction in nursing visits

of clinicians involved expressed satisfaction with Accel-Heal®

Accel-Heal® improved clinical outcomes and quality of life for patients when used as an adjunct to standard therapy. This resulted in significant cost savings. These benefits support the triple aim framework in NHS Scotland.
